

I must respectfully urge to reject NAB petition 04-160. Services such as XM Satellite Radio (what I use) allow me to know where to get weather or traffic reports when I am in another city. Unless I chance upon a billboard for a local station offering weather or traffic report, I would not have a clue where to get the information and would probably just do without the information at all. Please allow this convenience for those who pay for it and who would rather pay attention to the road than flipping randomly through the FM spectrum praying for luck. Thank you for taking time to read this.
